APPLICANT : MATSUSHITA ELECTRIC IND CO LTD;

INVENTOR : NAKAMURA MIKA;

INT.CL. : G02F 1/136 G02F 1/133

TITLE : LIQUID CRYSTAL DISPLAY DEVICE

ABSTRACT : PROBLEM TO BE SOLVED: To make small the source voltage drop caused by the through current of a CMOS.

SOLUTION: A +V power line 51 and a -V power line 52 which apply a source voltage to a drive circuit 24 are formed on a glass substrate 12 together. A source current bypasses the +V power line 51 and -V power line 52 through 10 intermediate patterns 54 and 55 each formed on a flexible substrate 53 at intervals of 25 mm and bypass lines 57 and 58 formed on a printed board 56 respectively. Consequently, the power lines decrease in wiring resistance, so even if a through current flows, a drop in the source voltage is suppressed small, so that the driving circuit 24 can operate securely.
